

Customer Journey Map

Date	27 June 2026
Team ID	SWTID-2026-9097
Project Name	Voice--Based--Concept--Understanding--Analyzer
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	•Opens the application, selects a topic, records or uploads an audio explanation, and starts analysis.	•Waits while the system transcribes speech, analyzes concept understanding, evaluates fluency, and calculates scores.	•Reviews transcript, scores, AI feedback, downloads the PDF report, and uses the feedback to improve.
Touchpoint <i>What part of the service do they interact with?</i>	•Streamlit homepage, audio recorder/upload section, Start Analysis button.	•Processing screen, loading indicator, AI backend (Whisper, Sentence-BERT, Librosa, Gemini).	•Results dashboard, waveform visualization, score cards, feedback section, Download PDF button.
Customer Thought <i>What is the customer thinking?</i>	•I hope the system accurately understands my explanation.	•"How well did I explain the concept? I hope the analysis is accurate."	•"Now I know my strengths and weaknesses. I can improve using this feedback."

Customer Feeling <i>What is the customer feeling?</i>	Curious, slightly nervous, and excited.	Patient, hopeful, and eager to see the results.	Satisfied, motivated, and more confident about improving future explanations.
Process Ownership <i>Who is in the lead on this?</i>	Frontend/UI Module – Handles user interaction, audio recording/upload, and input validation.	AI Processing Module – Whisper, Sentence-BERT, Librosa, scoring engine, and Gemini perform transcription, analysis, and feedback generation.	Reporting & Dashboard Module – Displays results, visualizations, stores session data, and generates the PDF report.
Opportunities	Add drag-and-drop upload, real-time microphone testing, multilingual support, and clearer recording instructions.	Reduce processing time, provide a progress bar with current analysis stage, improve scoring accuracy, and optimize AI response speed.	Add personalized learning recommendations, historical performance tracking, comparison with previous attempts, and interactive improvement suggestions.
